

Dismate^{PE}

Management by confusion!

REGISTRATION NUMBER: UK-2016-1028

Directions for use

Plot out a layout for the approximate placement of the dispensers before deploying them. The product is applied in a ready to use pouch.

The dispensers should be placed one unit in every 400-500m³. Where obstacles or obstructions are present the dispensers can be placed to accommodate the layout and air dynamics of the factory.

Keep the dispensers sealed in outer foil bag packaging until use.

The dispensers should be positioned 2-3 metres above the floor and fastened securely using the supplied wall mounting bracket.

Monitoring traps are recommended before, during and after treatment to assess adult moth populations as part of a pest management program.

Dispensers should be replaced every 3 months.

For professional use only.

For indoor use only.

To avoid risks to man and the environment, comply with the instructions for use.

The COSHH (Control of Substances Hazardous to Health) Regulations 2002 (as amended) apply to the use of this product at work.

DO NOT CONTAMINATE FOODSTUFFS, EATING UTENSILS OR FOOD CONTACT SURFACES.

Wash hands and exposed skin thoroughly after handling.

Dismate PE is a pheromone disruptant for professional use against food moths (*Pyralidae*) including Indian Meal Moths (*Plodia interpunctella*) and Mediterranean Flour Moths (*Ephestia kuehniella*) in confectionary manufacturing facilities and dried food processing/storage facilities.

Contains 0.837% w/w (Z,E)-Tetradec- 9,12-dienyl acetate Vapour Releasing Product

Mode of Action

Dismate PE is an attractant for professional use against food moths. It acts by disrupting the mating between male and female moths. Populations of the pest insects are reduced as the adult insects die and are not replaced by the next generation.

Continuous application will result in reduced levels of problem insects in all but the most severe infestation pockets. This product should be used as a part of an integrated pest management (IPM) program.

NOTE: This product has a slow mode of action and is intended for long-term use. The control of food moths is achieved over a period of time with continuous use of the product.

Russell IPM can assist with training and planning the product deployment through site survey, dispenser placement, data collection and advice on good hygiene practices.

First aid

If eye irritation persists: Get medical advice/attention.

IF INHALED: Call a POISON CENTRE/doctor if you feel unwell.

IF ON SKIN: Wash with soap and water.

IF SWALLOWED: Call a POISON CENTRE/doctor if you feel unwell.
